**DETAILED ACTION*****Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-7 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 5, 7, 8, 10, 11, 13-14 and 16 of U.S. Patent Application No. 10/518,770. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 5-14 of U.S. Patent Application No. 10/518,770 teach a method for manufacturing an optical recording medium by forming a resin light transmission layer on a substrate (resin layer), and making a hole in the center of an optical recording medium which comprises: a) scoring the resin layer and b) punching the center

hole through the substrate such that the center hole of the substrate is smaller in diameter than that of the hole in the resin layer.

***Allowable Subject Matter***

3. Claims 1-7 would be allowable after filing of a terminal disclaimer.
- The following is a statement of reasons for the indication of potential allowable subject matter: The **prior art** fails to teach any apparatus or method which describes cutting/scoring a first layer of **resin** to a larger diameter than that of the hole to be punched from the **opposite side** of the optical recording media. Additionally Examiner determined that claims from Application 10/762,306 now US Patent No. 7,270,527, Application 10/786,005 now US Patent No. 7,047,859, or Application 10/762,305 now US Patent No. 7,096,770, which are the closest art (not prior art) related to this application, do not render the method claims of the instant application obvious and thus there is not an instance of obvious type double patenting based on those applications.

Applicant's remarks are noted. However, a new rejection is made in view of co-pending application 10/518,770.
